

Before gluing, unpack all the tiles onto a flat surface so that they recover their characteristics (tile decompression).

## I. THE WALL

The wall must be flat, clean and dry. Clean and brush beforehand if necessary.

The “WALL PROTECTOR” boards are made to be used on a plastered, wooden, steel or block wall, etc. There must be no laitance, dust, oil or grease on the surface.

## II. THE GLUE

Use exclusively our HIGH TACK mastic glue – two 290ml-cartridges for 1 kit.

Please read with caution instructions for use of the HIGH TACK glue.

## III. LAYING

(Glue gun not provided)

Apply dots of HIGH TACK glue on both board and wall.

Double gluing necessary.

If the « WALL PROTECTOR » boards have no support on the ground, use a small wooden square file nailed to the wall in order to sustain the tiles.

Put to level

Fixation with steel nails if you have a concrete, block or wooden wall.

Press firmly the “WALL PROTECTOR” board against the wall and hit slowly the surface with a rubber mallet.

Lay 2 red boards then one black board.

Repeat as many times as necessary.

You need to check regularly the evenness of the « WALL PROTECTOR » boards

### **WARNING:**

**Leave no space between the boards.  
WAIT 48H BEFORE REMOVING THE  
STEEL NAILS**
